

Make **security** a top priority. Plan your **FREE** security review today and receive **FREE** Internet Presence Protection Service—a \$2,000 value.

What's involved in the review? A security review with one of SecurePipe's network security architects is designed to help evaluate your security posture. It includes a written report that documents your network environment, outlines potential vulnerabilities and identifies opportunities to improve your bank's compliance with examiners IT security guidelines.

When/how will this work? We will conduct a conference call at a time which is convenient for you and your colleagues. No site visits are involved and you never need to leave your office.

How will this benefit the bank? You will receive professional advice from a trusted ACB Business Partner. You will learn how to improve your security posture which could be relevant to directors, officers as well as third party auditors & examiners.

Is there a charge? No. This consultative network security review is **FREE**, but the benefits of this process could turn out to be priceless.

ACB Partners Endorse SecurePipe

“Network security is not a one time fix, a report or an occasional event—but an everyday discipline which requires ongoing vigilance, 24 hours a day, 7 days a week, 365 days each year. That’s why ACB outsourced the management of our own network security over three years ago. We put our trust in SecurePipe and can attest to their best practice standards through our own experience.”

Sam Lisker, Chief Information & Security Officer
